

WASHING MILK CONTAINERS

1. RINSE

Use lukewarm water. DO NOT rinse with hot water. Rinse off dirt and milk residue.

2. WASH

Use hot water. Add liquid detergent and bleach or a dry chlorinated detergent. Brush all surfaces. Scrub off remaining milk residue. Keep water above 49° (120°F) at all times.

3. RINSE

Use warm water. Add acid. Rinse containers. Do not rinse off the acid solution. Leave it on the bottles and pails while they dry. [May use an acid-sanitizer, also.]

4. DRY

Allow the bottles and pails to drain and dry. Do not stack pails inside each other. Do not sit pails upside down on a concrete floor.
