

Keeping Colostrum Clean

- 1. Put colostrum into an ice bath immediately after dumping from collection pail (or add bottled ice to pail).**

Bacteria start growing soon after harvesting. Bacteria in colostrum double in numbers every 20 minutes at cow body temperature.

- 2. Put colostrum into clean containers with clean lids or nipples.**

Start with clean containers and lids/nipples.

Sanitize bottles and nipples just before use with hot water & milk line sanitizer (chlorine bleach) solution.
