

# DIPPING NAVELS

## 1. Use fresh clean navel dip

- Always dump out soiled dip; start with fresh dip before every calf.
- Navel dip is brown and has an alcohol smell (7% tincture of iodine).

## 2. Wash off “MUD” with dip

- “MUD” is manure, urine and dirt.
- Use enough dip to get a clean umbilical cord and navel opening at belly.

## 3. Dip the full length of the cord in clean navel dip. Coat navel opening in belly with dip.

## 4. Redip after the calf is removed from the dam.
